

With passion for precision

Perfect in form and function
in every detail

CAM

► A modern programming system allows us to program and produce highly complex work pieces directly from the CAD file. All machines are connected with the central program management. Thus, all CNC programs are stored and available at all times.

PRECISION ENGINEERING FOR MECHANICAL AND PROCESS EQUIPMENT MANUFACTURING. MACHINING WITH STATE OF THE ART CNC MILLING AND TURNING TECHNOLOGY.

Precision is our business. We are a highly specialized mechanical workshop for the machining of metallic and non-metallic materials. Following our long-standing tradition, at our small and flexible workshop we mill highly sophisticated forms and produce high-precision turned parts for the engineering industry and the process equipment manufacturing. We are especially strong in the production of single parts as well as series of highly complex components. This makes us a competent partner for the construction of prototypes. On request, we undertake the production and the installation of entire assemblies for our customers.

that we couldn't solve in cooperation with our clients and suppliers. All our employees are qualified professionals. Together, we have a wealth of experience, which enables us to master diverse challenges and handle even the most demanding production tasks.

Our goal is to always maintain the most advanced state of development of the machinery. A wide range of CNC controlled machines of the latest generation, complemented by a range of conventional machine tools, helps our multi-skilled mechanics manage demanding production tasks according to individual customer requirements within the shortest time period.

Thanks to powerful and well-developed machinery, there's virtually no task

Sophisticated machining and manufacturing technology

- **Milling** CNC milling centers allow for up to 4- and 5-axis simultaneous machining.
- **Turning** CNC lathes with built-in milling technology
- **Drilling** Various drills, jig drill and milling machine, multi spindle drill
- **Sawing** Automated circular saw, automated band saw
- **Welding** Various welding processes
- **Grinding** Surface grinder

Production and installation of entire assemblies

Fast and flexible –
down to delivery

What makes our services so special

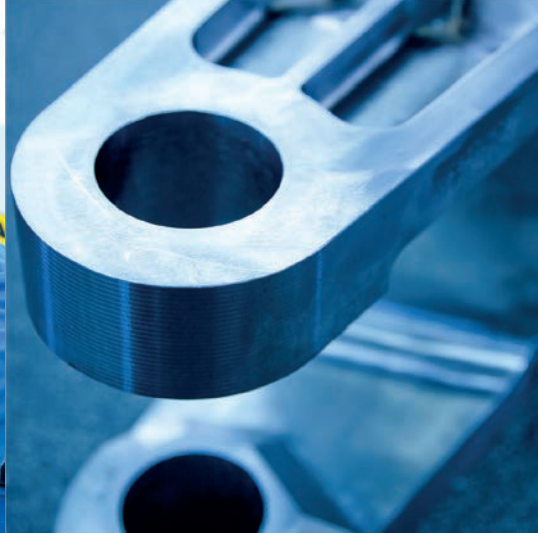

- ▶ Availability and willingness to help
- ▶ Flexible response to customer's wishes
- ▶ Extensive experience and know-how
- ▶ Established network of suppliers and specialists
- ▶ Rapid manufacturing of complex components using CNC machines

Services

- ▶ Technical consulting and planning
- ▶ Material procurement
- ▶ Timely delivery of pre-finished components

Our high precision components are used in many industries

- ▶ Mechanical manufacturing
- ▶ Equipment for the pharmaceutical and food industry
- ▶ Medical technology
- ▶ Rail vehicles and cable cars Aerospace and aircraft
- ▶ Wind energy and water technology

PRECISION FROM A TO Z. FROM THE MOMENT THE REQUEST IS PLACED TO THE TIMELY DELIVERY OF PRE-FINISHED COMPONENTS – WE FOCUS OUR ATTENTION ON THE REQUIREMENTS OF THE END PRODUCT.

Our day-to-day operation is characterized by dynamics and flexibility. As an outsourcing partner of industrial enterprises, we handle the production process of entire components, from material procurement to the timely delivery of pre-finished parts. Often our know-how is in demand even before the order is placed. A motivated team of professionally qualified employees thinks everything through when it comes to finding a creative solution for a certain technical problem. Many satisfied, long-term customers count on our advice. Apart from the experience in machining of different materials, we can draw on the know-how of an established network of suppliers and partners to jointly find the optimum solution for our customers.

As a small company with a dynamic team of motivated employees, we are able to demonstrate flexibility and speed when responding to customer requirements. It takes a very short time for inquiries and orders to reach the workshop. Thanks to short processes and modern machinery, we are always flexible when it comes to reacting to customer requirements and are able to promptly manufacture and deliver high-quality precision parts.

Apart from traditional mechanical and process equipment manufacturing, our components are in demand in the medical technology and pharmaceutical and food industries. We also have customers in the automotive and power generation industry.

Accurate and reliable –
to the last touch

OUR PRECISION PARTS ARE USED WORLD-WIDE.
THANKS TO OUR HOLISTIC QUALITY
APPROACH AND COST-EFFECTIVENESS,
WE CAN OFFER SWISS QUALITY AT
COMPETITIVE PRICES.

We manufacture high-quality products at internationally competitive prices. Our clients include many top Swiss companies from the industry. About 70 percent of components produced at our workshop are intended for installations that are later used somewhere abroad. High flexibility, high specialization, precision and Swiss quality are the essential factors that ensure success of our long-standing traditional business after more than fifty years on the market.

Our company, Feusi AG, was founded in 1956 by Paul Feusi as a small precision mechanics workshop. Since then, the company has changed its owners twice. It was expanded by the current owner and Managing Director, Roman Gebert,

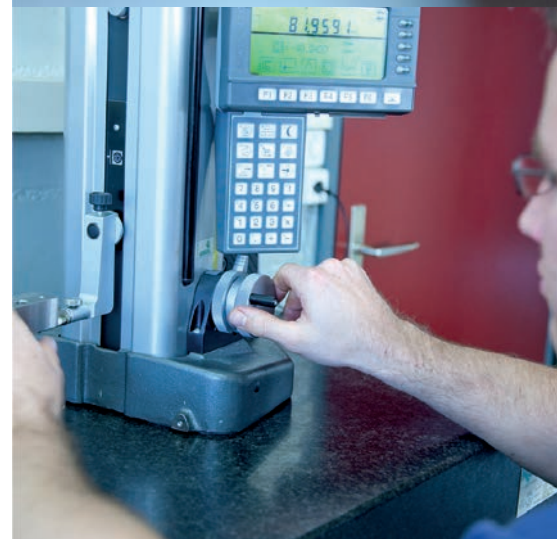

who continuously invested in the modernization of machinery and the continuing education of employees. All our specialists are trained multi-skilled mechanics, including many longtime employees. Besides, we provide training for qualified junior staff members and offer an apprenticeship for three or four aspiring multi-skilled mechanics.

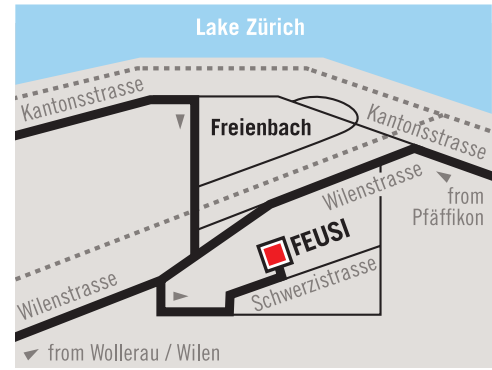

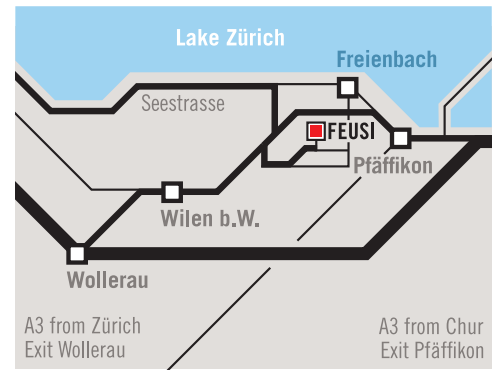

We value lean processes and flawless quality of our services. Being one of the first companies in our industry, we have achieved ISO certification. Our company has been certified according to ISO 9001 since 1995. The existence and constant further development of our company is based on these guidelines.

What you can rely on

- ▶ A team of qualified and intelligent professionals
- ▶ Customer relationship based on honesty and partnership
- ▶ Efficiency and competitiveness
- ▶ Swiss quality at world market prices High precision, flexibility and adherence to delivery dates
